

## What Are the Paint Markings on the Streets of Mendocino?

You may have noticed colorful paint markings appearing throughout town. These markings identify existing underground utilities and indicate the planned route of a new recycled water main to be installed.

The Mendocino City Community Services District (MCCSD) has begun construction on its Recycled Water Upgrade and Expansion Project and sewer main replacement. This important investment in our community will:

- Add **15 new fire hydrants** to enhance fire protection
- Provide approximately **300,000 gallons of recycled water storage**
- Upgrade elements of MCCSD's **wastewater treatment plant**
- Replace some aging **sewer main** to improve system reliability

Trenching is currently expected to be completed by **the end of June 2026**. For updates check the MCCSD web page: <https://www.mccsd.com/infrastructure-projects>

We appreciate your patience and support as we work to strengthen Mendocino's infrastructure, sustainability, and public safety. Thank you for helping us build a more resilient community.
