Table 1 2024-25 Rainfall Record

September 2025 Depth-to-Water (DTW)

The average DTW measurements District-wide in the 24 monitoring wells on September 18, 2025, was 19.95 ft. DTW averages are 1.1 ft. lower than August of 2025. The DTW averages in the five drought monitoring wells reported an average of 21.18 ft. which is about 1 ft lower than August of 2025. DTW averages are 3.37 ft. lower than September of 2024, and only 1 ft. better than a drought year like September 2021.

Figure 2 Average Depth-To-Water Chart

Following the Water Shortage Contingency Plan, May 31, 2025, was the most recent water shortage evaluation date. Rainfall totals and depth to water levels indicated there was not a water shortage within the District at that time. If no water shortage is declared by that date, no further evaluation is required until January 31, 2026.

As of August 20th, 2025, the hydrological testing period for 2025 is open. There are currently no properties within the District that have pending applications and planned drawdown tests scheduled at this time. The testing period will remain open until 6" inches of rain is recorded within the District.
