May 2025 Depth-to-Water (DTW)

The average DTW measurements District-wide in the 24 monitoring wells on May 20, 2025, was 14.33 ft. DTW averages are 2 ft. lower than April of 2025. The DTW averages in the five drought monitoring wells reported an average of 16.15 ft. which is 1.52 ft. lower than April of 2025. DTW averages are 1.84 ft. lower than May of 2024, and 3.33 ft. better than a drought year like 2021.

Figure 2 Average Depth-To-Water Chart

Following the Water Shortage Contingency Plan, March 31, 2025, was the most recent water shortage evaluation date. Current rainfall totals and depth to water levels indicate there is not a water shortage within the District at this time. May 31, 2025, is the next water shortage evaluation date. If no water shortage is declared by that date, no further evaluation is required until January 31, 2026.
